(54) Title: A METHOD AND SYSTEM FOR EXTRACTING/STORING SPECIFIC PROGRAM FROM MPEG MULTIPLE PROGRAM TRANSPORT STREAM

(57) Abstract: This invention provides an improved method for storing/replaying a specific program from a MPEG-2 multiple program transport stream. When storing, the method discards a related transport packet of the non-user-selected program and inserts a null packet at the corresponding discarding position, and the effective load of this null packet contains a number which indicates the number of continuously discarded packets at this position; when replaying, if the effective load of a null packet contains a specific numerical value, the method adds some null packets beside this null packet, the number of the added null packets being equal to that the specific numerical value minus one.
